AKANKSH HARISH SHETTY

Data Analyst | Operations Reporting and Process Improvement

Syracuse NY | (+1) 315-746-1174 | akankshshetty@worksmail.in | LinkedIn | Portfolio

SUMMARY

Data Analyst with 3+ years of experience delivering dashboards, reconciliations, and recommendations to business and engineering stakeholders, currently at National Grid. Reconcile 200K records across five enterprise systems, maintain Power BI reporting used by 30+ stakeholders, and prepare findings for managers and regional leadership. Experienced in coordinating work across teams and turning analysis into process improvements.

EXPERIENCE

Data Analyst | National Grid | New York **Dec 2025 - Present**

- Reconcile 200K records across five interconnected enterprise systems, identifying data discrepancies and tracing them to their source systems through root-cause analysis
- Gather requirements from stakeholders across New York State and prepare findings for review with my manager and regional manager, including a four-finding Critical Valve data quality assessment across four regions
- Built a five-page Power BI report and presentation on 6,130 valves for a Technical and Operations Meeting, comparing two source systems to support the planned Maximo migration
- Build and maintain Power BI dashboards and Power Query models covering operational and engineering KPIs, replacing 4 recurring manual reports and serving 30+ business and technical stakeholders
- Develop Python validation scripts with automated integrity checks, reducing manual effort by approximately 60% across 100K-record sets
- Write SQL queries for extraction, validation, reconciliation, and ad hoc analysis across multiple enterprise sources, and maintain ETL pipelines and dimensional models for consistent reporting datasets
- Use Esri ArcGIS and enterprise geodatabases to audit approximately 1M spatial features against source-system data, investigating mismatches and supporting asset-data accuracy

Data Analyst | Infosys, India | **Jul 2021 – Aug 2023**

- Analysed policy, claims, customer, premium, and payment data using SQL and Python to identify trends, data-quality issues, and operational exceptions across insurance datasets
- Built Tableau dashboards to track policy volumes, claims activity, premium collections, claim turnaround, and key operational KPIs for business and management teams
- Automated recurring reporting and data-preparation activities using Python, SQL, and Power Query, reducing manual reporting effort and improving reporting consistency
- Worked with business stakeholders to translate insurance reporting requirements into dashboards, analytical reports, and data-driven recommendations
- Used Generative AI tools such as ChatGPT and Microsoft Copilot to accelerate SQL development, documentation, data-analysis workflows, and exploratory analysis, while manually validating outputs before using them in business reporting

SKILLS

- **Business & Delivery:** Stakeholder Management, Cross-functional Collaboration, Requirements Gathering, Process Improvement, Root Cause Analysis, Data Audits
- **BI & Reporting:** Power BI, DAX, Power Query, Tableau, KPI Development, Dashboard Development, Presentations
- **Data & Analytics:** SQL, Python, R, Advanced Excel, Statistical Analysis, Data Cleaning, Data Validation, Data Reconciliation
- **Data Engineering:** ETL/ELT, Data Integration, Data Modeling, Data Quality, Data Governance, Data Lineage
- **Databases & Tools:** MySQL, PostgreSQL, SQL Server, BigQuery, MongoDB, AWS, GCP, Git/GitHub, GIS, Maximo
- **AI & Automation:** Generative AI, Copilot, Claude, Prompt Engineering, Python Automation, Predictive Modeling, Forecasting

PROJECTS

1. **Healthcare Database & Analytics Solution | SQL, Power BI, PowerApps**

- Gathered requirements from stakeholders, designed a normalized relational database, implemented ETL and data-integration workflows, and delivered Power BI dashboards and PowerApps workflows tracking utilization and workload metrics.

2. **Energy Demand Forecasting | R, XGBoost**

- Achieved approximately 0.825 R-squared on held-out data with an XGBoost forecasting model, engineering time-series features and an automated validation framework and translating output into capacity-planning and peak-demand insights.

3. **NYC Crime Trend & Demographic Analysis | Tableau**

- Analysed 560,000+ records and built interactive Tableau dashboards using parameters, Top-N analysis, and calculated metrics to translate demographic, geographic, and temporal trends into accessible visual insights.

EDUCATION

- Master of Science in Information Systems: Syracuse University, New York, USA, 2025
- Bachelor of Technology in Electronics and Telecommunication Engineering: University of Mumbai, India
- SQL Advanced (HackerRank) | Google Data Analytics Certificate | AWS Generative AI Applications Specialization
